

HackCelestial 3.0 Additional Task 2

MANDATORY TECHNOLOGY REQUIREMENT (NUGEN INTELLIGENCE)

Dear Participants,

As part of HackCelestial 3.0, it is compulsory for every team to use **Nugen Intelligence in their project.**

Every team must use Nugen's AI model alignment/customization capabilities to customize or fine-tune an AI model according to their project's specific domain and use case.

The customized/aligned model must then be integrated into your working project and used for inference.

Simply using a generic AI model or making a basic API call will not satisfy this requirement.

Your implementation should demonstrate:

Base AI Model → Nugen Alignment/Customization → Domain-Specific Model → Integration into Your Project

The customization should be relevant to your assigned problem statement and contribute meaningfully to your final solution.

📖 Documentation: https://docs.nugen.in

Nugen Intelligence integration and model customization is COMPULSORY for ALL TEAMS.

Good luck!
